

Teknatool Chuck Range Jaw Slide

The Teknatool Nova Range of Chucks have the Nova Quality and Design thinking, right down to the smallest component.

The Nova Jaw Slide (set of 4) in a Teknatool Chuck body

Common Jaw Fixing

All Teknatool Nova Chucks use the same jaw fixing method, meaning appropriate* accessory jaws can be fitted across the range to any Teknatool chuck - Nova, Precision Midi, SuperNova, SuperNova2 or Titan.

*(*The Compac requires additional accessory in order to fit the accessory range of Nova Jaws. Not all accessory jaws are recommended for use on every chuck in the range, for example large accessory jaws designed for large work are not recommended for use on the small Precision Midi Chuck - for more details see our website or your retailer)*

Precision

All jaw slides are so precise that an individual jaw can be supplied (previously a matched set of 4 was required should a slide be lost)*

Reorder codes:

Jaw Slide #1 - 23051

Jaw Slide #2 - 23052

Jaw Slide #3 - 23053

Jaw Slide #4 - 23054

**Chucks manufactured from 2004 onwards only. Titan and other older chucks require matched sets of jaw slides.*

Copper Impregnated

The distinctive copper colour is due to copper impregnated material, aids hardness and wear resistance. Copper has outstanding qualities as an anti-seize and low friction agent. Prior to the ball bearing invention, copper was the primary metal in bearing materials. The copper is fused into the material for finest mechanical properties.

Individually numbered, 1-4

Individually numbered for easy identification

Precision Fit and Long Life

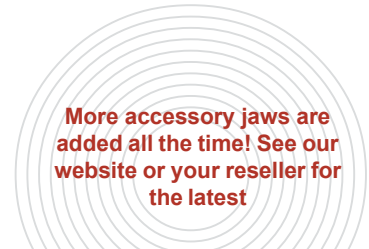

Large strong section guideways, with strong 6mm slideway tongue.. Large surface area for long term bearing surface wear and resistance.

Radiused Profile Teeth

Jaw slide teeth have radiused edge profiles to reduce wear and frictional resistance on scroll ring.

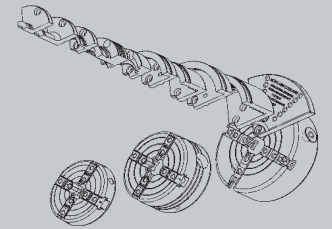

Nova - the mark of quality

Hardened composite material

More accessory jaws are added all the time! See our website or your reseller for the latest

NOVA ACCESSORY JAW RANGE

The Teknatool Nova Chuck range has the widest range of accessories of any chuck on the market place, and are backwards compatible - meaning that your chuck is the most versatile available, and your chuck purchase holds its value.

NOVA PRECISION MIDI CHUCK
