

# SuperNova - The Right Choice

The SuperNova is the best Woodturning Chuck option for Woodturners. Here's why:

## POWER

Amazing holding power. "Tuff Lock" Hardened Gears. Special gear form (pat.app.) is much larger and more rugged than comparable chucks. Tough construction, built to take the demands of modern woodturning.

## QUALITY

Made only from the best quality K1045 Heavy duty Machine Steel. The body is Nickel Plated for long rust free life. Accurate: Precision machined to close tolerances to give Woodturners all the accuracy they need. Standard 2" jaws provide a superior grip compared to other chucks for all mid range turning (8"-14")

## COMPATIBILITY

All accessories and inserts fully interchangeable between the Nova and SuperNova Chucks. Other chucking systems are not interchangeable and require additional stand alone accessories. Easily adapts to around 95% of lathes on the market.

## USER FRIENDLY

Unique pivoting 'Smooth Action' handle - positions the handle in the most comfortable position for use. Easy to clean. Lightweight - able to be used on most woodlathes - other geared chucks are too heavy or big to be used on smaller to mid-range lathes. The SuperNova has the smallest extension from the spindle, putting the least strain on the lathe.

## WIDEST ACCESSORY RANGE

The SuperNova and Nova Chucks have the widest accessory range of any chuck on the market today. This means that all Woodturning projects can be easily accommodated by the SuperNova.

## BEST SUPPORT

A whole lot of extras that other Manufacturers don't offer:  
Comprehensive Website: [www.teknatool.com](http://www.teknatool.com)  
Download projects, contact for help, user information, product reviews, and much more. Regular Newsletters exclusive to Teknatool owners. Full 24 month warranty. Contact your nearest Teknatool reseller for videos and pamphlets on the SuperNova.
